

John Micah Mercado

Jacksonville, FL | mikkomercado97@gmail.com | +1 954 534 1590 | <https://www.linkedin.com/in/john-micah-mercado-03611624a/> | <https://github.com/mercadodevsec>

PROFESSIONAL SUMMARY

IT senior with full-stack development experience and a strong technical foundation spanning web, mobile, and back-end systems. Proficient in Python and Java, with additional familiarity across C#, JavaScript, C++, Kotlin, and modern technologies including React.js, REST APIs, Node.js, MySQL, Jetpack Compose, HTML, CSS, and Linux. CompTIA Security+ certified with hands-on experience in multithreading, socket programming, data structures, cloud computing, networking, Git/GitHub, and Microsoft Office Suite. A self-starting developer with a proven ability to independently deliver complete, functional software solutions.

EDUCATION

University of North Florida

Expected Graduation: July 31st, 2026

B.S. Information Technology. GPA: 3.95.

Relevant Coursework: Computer Networks, Cloud Computing, Cybersecurity Systems, Intrusion Detection, Forensics, Systems Administration, Computer Programming, IT Project Management

PROJECTS

Web Development Projects (Personal, JavaScript, HTML, CSS)

July 2026 – Present

- Passenger counter app with real-time count updates using HTML/CSS/JavaScript.
- Browser-based Blackjack game with player-vs-dealer logic and score tracking.
- Chrome extension for capturing and exporting sales leads from web pages.
- Personal portfolio website built with HTML/CSS and hosted on GitHub Pages.
- Developed a full-stack web application Rock Paper Scissors game using Express, React, TypeScript, and SQLite3.

FinCal: Financial Calculator App (Personal, Java/Kotlin)

May 2026 – Present

- Building an Android app with financial calculators covering mortgage, investment, retirement, and tax planning.
- Implementing core financial formulas including compound interest, loan amortization, and ROI using Java and Kotlin.
- Designing category-based UI navigation with Jetpack Compose and input validation.
- Managing project in GitHub for version control, tracking, and app distribution.

Customer Churn Pipeline (Personal, C#)

March 2026 – March 2026

- Built a C# application using classes and collections to read, parse, and process customer data from CSV files, including product lists and engagement metrics.
- Developed logic to analyze user behavior — login frequency, spending, tenure, and support issues — to identify customers at high risk of churn.
- Implemented file handling, data validation, and input/output operations to clean, structure, and analyze customer records.

Academic Projects

August 2024 – February 2025

- Built a multithreaded socket server for simultaneous client handling, and implemented a Binary Search Tree with efficient put, get, delete, and iterator operations.
- Developed an EncodedList using Byte Pair Encoding (BPE) with prioritized token-pair reduction, and designed a scheduling application to sort transportation data by defined criteria.
- Created a modified Tic-Tac-Toe game with a rolling board mechanic and space-efficient undo, alongside C++ programs for CO₂ emissions analysis and text processing (word/vowel counting).
- Implemented file input/output operations in C++ for data storage and processing, complementing Java-based network communication and in-memory data structure management.

CERTIFICATIONS

- CompTIA Security+, CompTIA, December 2024
- Level 1: Excel White Belt, McGraw Hill
- Level 1: Word White Belt, McGraw Hill
- Level 1: PowerPoint White Belt, McGraw Hill

SKILLS

Programming Languages: Java, Kotlin, Python, JavaScript, C#, C++

Technologies and Tools: Android Development, Jetpack Compose, Multithreading, Socket Programming, Binary Search Trees, Byte Pair Encoding, Git/GitHub, Linux, React.js, REST API, HTML, CSS, Node.js, MySQL

Office and Productivity: Microsoft Excel, Microsoft Word, Microsoft Access
