PROFESSIONAL SUMMARY

IT senior (3.95 GPA) with full-stack development experience and a strong technical foundation spanning web, mobile, and back-end systems. Proficient in Python and Java, with additional familiarity across C#, JavaScript, C++, Kotlin, and modern technologies including React.js, REST APIs, Node.js, MySQL, Jetpack Compose, HTML, CSS, and Linux. CompTIA Security+ certified with hands-on experience in multithreading, socket programming, data structures, cloud computing, networking, Git/GitHub, and Microsoft Office Suite. A self-starting developer with a proven ability to independently deliver complete, functional software solutions.

EDUCATION

University of North Florida

Jacksonville, FL

B.S. Information Technology. GPA: 3.95.

August 2024 - Expected Graduation: July 31st, 2026

Relevant Coursework: Computer Networks, Cloud Computing, Cybersecurity Systems, Intrusion Detection, Forensics, Systems Administration, Computer Programming, IT Project Management

PROJECTS

FinCal: Financial Calculator App

May 2026 – Present

Personal Project, Java/Kotlin

- Building an Android app with 30+ financial calculators covering mortgage, investment, retirement, and tax planning.
- Implementing core financial formulas including compound interest, loan amortization, and ROI using Java and Kotlin.
- Designing category-based UI navigation with Jetpack Compose and input validation.
- Managing project in GitHub for version control, tracking, and app distribution.

Customer Churn Pipeline

March 2026 – March 2026

Personal Project, C#

- Built a C# application using classes and collections to read, parse, and process customer data from CSV files, including product lists and engagement metrics.
- Developed logic to analyze user behavior — login frequency, spending, tenure, and support issues — to identify customers at high risk of churn.
- Implemented file handling, data validation, and input/output operations to clean, structure, and analyze customer records.

Java Programming

January 2025 – February 2025

Academic Project

- Built a Java Concurrent Socket Server supporting multiple simultaneous clients using multithreading.
- Developed an EncodedList implementing real-time Byte Pair Encoding (BPE) compression using prioritized token-pair reduction.
- Implemented a Binary Search Tree with efficient put, get, delete, and iterator operations.
- Designed a scheduling application that sorts transportation data based on defined criteria.
- Created a modified Tic-Tac-Toe game featuring a rolling board mechanic and space-efficient undo functionality.

C++ Programming

August 2024 – November 2024

Academic Project

- Developed a program to calculate and analyze CO2 emissions data.
- Built a text analysis application to count words and vowels from a given input script.
- Implemented file input and output operations to efficiently process and store data.

CERTIFICATIONS

- CompTIA Security+, CompTIA, December 2024
- Level 1: Excel White Belt, McGraw Hill
- Level 1: Word White Belt, McGraw Hill
- Level 1: PowerPoint White Belt, McGraw Hill

SKILLS

Programming Languages: Java, Kotlin, Python, C#, JavaScript, C++,

Technologies and Tools: Android Development, Jetpack Compose, Multithreading, Socket Programming, Binary Search Trees, Byte Pair Encoding, Git/GitHub, Linux, React.js, REST API, HTML, CSS, Node.js, MySQL

Office and Productivity: Microsoft Excel, Microsoft Word, Microsoft Access
